# Wireless Configuration for Android Mobile devices

Frostburg State University offers wireless service to all employees and students which can be accessed almost anywhere on campus.

Getting Started

1. Click the **Settings** icon, then select **Wi-Fi**

2. Select the **WiFi@FSU** wireless network

3. For the **EAP** method

   select **PEAP**

   In the **Phase 2 authentication** field

   select **MSCHAPV2**.

   For the **CA certificate** select

   None, Unspecified, or Do not validate

   In the **Identity** field

   type your **FSU username**

   (e.g. jdoe@frostburg.edu)

   Leave the Anonymous identity field blank

   In the in **Password** field

   type your **FSU password**

   Then click **Connect.**

4. You should now be connected and online using **WiFi@FSU**.

You should not need to enter your credentials on subsequent connections to **WiFi@FSU**. Your Android device should be configured to automatically connect to this network in the future. If you aren't automatically connected, choose **Settings** and click the **WiFi@FSU** wireless to connect.

IMPORTANT NOTE

When you change your FSU password don't forget to change it on all your mobile devices! You can do this by opening the **Wi-Fi Settings**, clicking on **WiFi@FSU** and selecting **Forget**. You can then reconnect with the new password.

If you do not do this after a password change, your device will continue trying to connect with the old password and cause your account to become locked out.

Need Help?

Call the FSU Help Desk at 301-687-7777 Thank you.
