Wireless Configuration for Mac OS X

Frostburg State University offers wireless service to all employees and students which can be accessed almost anywhere on campus.

Getting Started

These instructions assume you have a computer running Mac OS X and an installed wireless network interface card (NIC) which supports WPA2 encryption.

1. Click the Airport icon in the Finder and select WiFi@FSU.

2. You will be prompted to enter your credentials, type your FSU username and password, click OK:

3. You should now be connected and online using WiFi@FSU. You should not need to enter your credentials on subsequent connections to WiFi@FSU. Your Mac should be configured to automatically connect to this network in the future. If you aren’t automatically connected, choose the WiFi@FSU network from the wireless drop-down to connect.

Need Help?
